

WINTER-2017 EXAMINATION  
Model Answer

Subject Code:

17103

**Important Instructions to examiners:**

- 1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.
- 2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.
- 3) The language errors such as grammatical, spelling errors should not be given more Importance (Not applicable for subject English and Communication Skills).
- 4) While assessing figures, examiner may give credit for principal components indicated in the figure. The figures drawn by candidate and model answer may vary. The examiner may give credit for any equivalent figure drawn.
- 5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate's answers and model answer.
- 6) In case of some questions credit may be given by judgement on part of examiner of relevant answer based on candidate's understanding.
- 7) For programming language papers, credit may be given to any other program based on equivalent concept.

Q. No.	Sub Q. N.	Answer	Marking Scheme																		
1	(c)	<p><b>Differentiate between orbit and orbital. (any two)</b></p> <table border="1"><thead><tr><th>Sr. No.</th><th>Orbit</th><th>Orbital</th></tr></thead><tbody><tr><td>1)</td><td>It is fixed path along which the electrons revolve around the nucleus.</td><td>It is the region in the space where the probability of finding an electron is maximum.</td></tr><tr><td>2)</td><td>Orbits are designated by letters K, L, M, N, O, P.</td><td>Orbitals are designated by letters s, p, d, f,</td></tr><tr><td>3)</td><td>Orbit is circular paths or elliptical in shape.</td><td>The orbitals have different geometrical shapes. e.g. s-Spherical, p-dumb bell shaped.</td></tr><tr><td>4)</td><td>The maximum number of electrons in an orbit is given by <math>2n^2</math> rule.</td><td>Orbital can contain maximum two electrons with opposite spins (<math>\uparrow\downarrow</math>)</td></tr><tr><td>5)</td><td>The number of orbits from the nucleus are <math>n=1, 2, 3, 4, 5, 6</math> etc.</td><td>The number of orbitals relative to energy level are <math>n^2=1, 4, 9, 16</math> etc.</td></tr></tbody></table>	Sr. No.	Orbit	Orbital	1)	It is fixed path along which the electrons revolve around the nucleus.	It is the region in the space where the probability of finding an electron is maximum.	2)	Orbits are designated by letters K, L, M, N, O, P.	Orbitals are designated by letters s, p, d, f,	3)	Orbit is circular paths or elliptical in shape.	The orbitals have different geometrical shapes. e.g. s-Spherical, p-dumb bell shaped.	4)	The maximum number of electrons in an orbit is given by $2n^2$ rule.	Orbital can contain maximum two electrons with opposite spins ( $\uparrow\downarrow$ )	5)	The number of orbits from the nucleus are $n=1, 2, 3, 4, 5, 6$ etc.	The number of orbitals relative to energy level are $n^2=1, 4, 9, 16$ etc.	2  1 mark each
Sr. No.	Orbit	Orbital																			
1)	It is fixed path along which the electrons revolve around the nucleus.	It is the region in the space where the probability of finding an electron is maximum.																			
2)	Orbits are designated by letters K, L, M, N, O, P.	Orbitals are designated by letters s, p, d, f,																			
3)	Orbit is circular paths or elliptical in shape.	The orbitals have different geometrical shapes. e.g. s-Spherical, p-dumb bell shaped.																			
4)	The maximum number of electrons in an orbit is given by $2n^2$ rule.	Orbital can contain maximum two electrons with opposite spins ( $\uparrow\downarrow$ )																			
5)	The number of orbits from the nucleus are $n=1, 2, 3, 4, 5, 6$ etc.	The number of orbitals relative to energy level are $n^2=1, 4, 9, 16$ etc.																			
	d)	<p><b>State factors affecting degree of ionization. (Any Two)</b></p> <p><b>1. Nature of Solute:</b> - Ionic compounds such as acids, bases &amp; salts are highly ionized in solution. e.g. strong acids like HCl, <math>H_2SO_4</math> &amp; strong bases like NaOH, KOH are highly ionized in solution. Weak acids like <math>CH_3COOH</math> &amp; weak bases <math>NH_4OH</math> are weakly ionized in solution.</p> <p><b>2. Nature of Solvent:</b> - In polar solvents like water &amp; ammonia, degree of ionization is more. In non-polar solvents degree of ionization is less.</p> <p><b>3. Concentration of the solution:</b> - If concentration of solution is more, then degree of ionization is less. On the other hand in dilute solution degree of ionization is more.</p> <p><b>4. Temperature:</b> - At higher temperature, molecules acquire thermal energy hence degree of ionization increases with increase in temperature</p>	2  1mark each
