Important Instructions to examiners:
1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.
2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.
3) The language errors such as grammatical, spelling errors should not be given more importance. (Not applicable for subject English and Communication Skills.)
4) While assessing figures, examiner may give credit for principal components indicated in the figure. The figures drawn by the candidate and those in the model answer may vary. The examiner may give credit for any equivalent figure drawn.
5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate’s answers and the model answer.
6) In case of some questions credit may be given by judgment on part of examiner of relevant answer based on candidate’s understanding.
7) For programming language papers, credit may be given to any other program based on equivalent concept.

**Q.1** | **a) Ans.** | **Answer any TEN of the following:**
| | **Explain the term law of machine.**
The relation between the load lifted (W) and the effort applied (P) is known as the law of machine. This relationship, when plotted on a graph results in a straight line as shown below.
The equation of this straight line is –

\[ P = (mW + c)N \]

Where,
m = slope of line = constant
c = Intercept on y axis = effort required to start the machine

1 | 1

| **b) Ans.** | **How will you find whether machine is reversible or not?**
By calculating the efficiency of machine, we can decide whether the machine is reversible or not.
If %\(\eta\) < 50% machine is non-reversible i.e. self-locking machine.
If %\(\eta\) > 50% machine is reversible.

j) What are the two advantages of friction?

1) One can walk easily on rough surface than smooth surface.
2) Moving vehicle on road can be stopped suddenly by applying brakes.
3) One can hammer nail into wall.
4) One can easily hold pen, pencil & can write on paper.

k) Define angle of repose.

Angle of repose is defined as the angle made by the inclined plane with the horizontal plane at which the body placed on an inclined plane is just on the point of moving down the plane, under the action of its own weight.

<td><strong>In a lifting machine, a load of 10 KN is raised by effort of 300 N. If the efficiency is 75%. Calculate (MA) &amp; (VR), if the machine lifts a load by effort of 550 N. Find the law of machine.</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Ans.</td>
<td>[MA = \frac{W}{P} = \frac{10000}{300} = 33.33]</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>(% \eta = \frac{MA}{VR} \times 100)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>(VR = 44.44)</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>
Q.2 Law of machine is –

\[
P = mW + C
\]

300 = m(10000) + c \quad \text{--- (1)}

550 = m(20000) + c \quad \text{--- (2)}

Subtracting equation (1) from (2)

\[
m = \frac{550 - 300}{20000 - 10000} = 0.025
\]

Putting value of \( m \) in equation (1),

300 = (0.025 \times 10000) + C

\[C = 50 \text{ N}\]

Hence, law of machine is, \( P = (0.025)W + 50 \text{ N} \)

d) In a differential axle & wheel, the dia. of wheel is 400 mm & that of axle is 100 mm & 80 mm, if an effort of 50 N can lift a load of 1500 N, find VR & efficiency of the machine.

(1) VR of differential axle & wheel is given by -

\[
VR = \frac{2D}{d_1 - d_2} = \frac{2 \times 400}{100 - 80}
\]

\[VR = 40\]

\[
M \cdot A. = \frac{1500}{50} = 30
\]

\[
\% \eta = \frac{M \cdot A. \times 100}{V \cdot R} = \frac{30 \times 100}{40} = 75\%
\]

e) A screw jack has effort wheel dia of 200 mm & pitch is 5 mm. Find VR, if load of 1000 N is lifted by an effort of 250 N. Find the efficiency of a machine.

(1) VR of simple screw jack is given by –

\[
VR = \frac{\pi D}{p}
\]

\[
VR = \frac{\pi \times 200}{5} = 125.66
\]

### Question 3

**d)** Four forces of 30 N (upward), 40 N (downward), 70 N (upward) & 60 N (downward) are acting in a series. Distances between the forces are 400 mm, 600 mm, 800 mm respectively. Find the moment of a couple.

**Ans.**

Taking moment of all forces about 30 N force i.e. about point A

\[
M = (30 \times 0) + (40 \times 400) - (70 \times 1000) + (60 \times 1800)
\]

\[M = 54000 \text{ Nm (Clockwise)}\]

|          |           | 2) Magnitude of Resultant\n\[R = \sqrt{\left(\sum F_x\right)^2 + \left(\sum F_y\right)^2} = \sqrt{(-281.21)^2 + (334.23)^2}\nR = 436.79 N\] | 1 | |
### Q.3

3) Since $\sum F_x$ is –ve & $\sum F_y$ is +ve,  
R lies in Second quadrant  
4) Position of Resultant  
$$\theta = \tan^{-1} \left( \frac{\sum F_y}{\sum F_x} \right) = \tan^{-1} \left( \frac{334.23}{281.21} \right)$$  
$$\theta = 49.92^\circ$$

### Q.4

**Answer any FOUR of the following:**

a) Find the resultant & magnitude & direction of the forces acting on a regular pentagon shown in Fig. 3

#### Ans.

1) Resolving all forces  
$$\sum F_x = 8 + 6\cos 36 + 4\cos 72 - 2\cos 72 = +13.47kN$$  
$$\sum F_y = 6\sin 36 + 4\sin 72 + 2\sin 72 = +9.23kN$$  
2) Magnitude of Resultant  
$$R = \sqrt{(\sum F_x)^2 + (\sum F_y)^2} = \sqrt{(13.47)^2 + (9.23)^2}$$  
$$R = 16.33kN$$  
3) Since $\sum F_x$ is +ve & $\sum F_y$ is +ve,  
R lies in First quadrant  
4) Position of Resultant  
$$\theta = \tan^{-1} \left( \frac{\sum F_y}{\sum F_x} \right) = \tan^{-1} \left( \frac{9.23}{13.47} \right)$$  
$$\theta = 34.42^\circ$$
Six parallel forces of magnitude 1000 N, 1500 N, 1800 N, 2000 N, 2400 N, 2700 N are acting at 1, 3, 5, 7, 8 m from the first force. Forces 1st, 3rd, & 5th are acting upwards while other acting vertically downwards. Find the resultant force analytically.

1) Magnitude of Resultant
\[ R = +1000 - 1500 + 1800 - 2000 + 2400 - 2700 = -1000 \text{ N} \]
- ve sign indicates Resultant acts vertically downwards.

2) Position of Resultant
Considering Varignon’s theorem of moment & taking moment of all forces @ about 1000 N force.
Let, \( R \) acts at \( x \) distance from 1000 N force.
\[ \sum M_F = M_R \]
\[ (1000 \times 0) + (1500 \times 1) - (1800 \times 3) + (2000 \times 5) - (2400 \times 7) + (2700 \times 8) = 10900 = 1000 \times x \]
\[ x = 10.9 \text{ m} \]
Hence, \( R \) must be located at 10.9 m distance from 1000 N force, so as to produce clockwise moment.

Write any four properties of a couple.
1) The resultant of the forces of a couple is zero.
2) The moment of a couple is equal to the product of one of the force & arm of couple.
3) Moment of a couple about any point is constant.

<td>Ans.</td>
<td>A horizontal force P as shown in Fig. 7 keeps the weight of 100 N in equilibrium. Find the magnitude P &amp; tension in the string T.</td>
<td></td>
</tr>
</tbody>
</table>

Using Lami’s theorem,

\[
\frac{W}{\sin 100^\circ} = \frac{T}{\sin 90^\circ} = \frac{P}{\sin 170^\circ}
\]

\[
\frac{100}{\sin 100^\circ} = \frac{T}{\sin 90^\circ} = \frac{P}{\sin 170^\circ}
\]

Using term (1) and (2)

\[
T = 100 \times \frac{\sin 90^\circ}{\sin 100^\circ}
\]

\[
T = 101.54 \text{ N}
\]

Using term (1) and (3)

\[
\frac{100}{\sin 90^\circ} = \frac{P}{\sin 170^\circ}
\]

\[
P = 100 \times \frac{\sin 170^\circ}{\sin 100^\circ}
\]

\[
P = 17.63 \text{ N}
\]
### Subject: Engineering Mechanics

#### Que. No. 5

**b)** A sphere of weight 400 N rests in a groove of smooth inclined surfaces which are making 60° & 30° inclination to the horizontal. Find the reactions at the contact surfaces.

**Ans.**

Using Lami’s theorem,
\[
\frac{400}{\sin 90} = \frac{R_A}{\sin 150} = \frac{R_B}{\sin 120}
\]

(1)  \(2\)  \(3\)

Using term (1) and (2)
\[
\frac{400}{\sin 90} = \frac{R_A}{\sin 150}
\]
\[
R_A = \frac{\sin 150}{\sin 90} \times 400
\]
\[
R_A = 200N
\]

Using term (1) and (3)
\[
\frac{400}{\sin 90} = \frac{R_B}{\sin 120}
\]
\[
R_B = \frac{\sin 120}{\sin 90} \times 400
\]
\[
R_B = 346.40N
\]

**c)** A beam of span 4 m is simply supported at its ends. It carries concentrated load of 15 KN & 20 KN at 1m & 2m from left hand support respectively. It carries UDL of 10 KN/m from the right end. Determine reactions at the support.

**Ans.**
Subject: Engineering Mechanics

Q.5

1) Equivalent point load and it’s position
   Equivalent point load = Intensity of udl X span of udl
   = 10 X 2
   = 20 KN

   Position from equivalent point load from RA
   = 1 m + 1 m + Span of udl / 2 = 2 + (2/2) = 3 m

2) Applying equilibrium conditions
   \[ \Sigma F_y = 0 \quad \text{and} \quad \Sigma M = 0 \]

   \[ \Sigma F_y = 0 \]
   \[ \begin{align*}
   RA &- 15 - 20 - 20 + RB = 0 \\
   RA + RB & = 55 \text{ KN} \quad \text{-------(1)}
   \end{align*} \]

   \[ \Sigma M_A = 0 \]
   Taking moment of all forces @ point A
   \[ \begin{align*}
   (RA \times 0) + (15 \times 1) + (20 \times 2) + (20 \times 3) - (RB \times 4) &= 0 \\
   RB &= 28.75 \text{ KN}
   \end{align*} \]

   Putting value of RB in eqn. (1)
   \[ \begin{align*}
   RA + 28.75 &= 55 \\
   RA &= 26.25 \text{ KN}
   \end{align*} \]

   A parcel weighing 200 N is just on the point of moving horizontally by a force of 52 N. What is coefficient of friction?

   For limiting equilibrium
   \[ \Sigma F_y = 0 \quad \text{and} \quad \Sigma F_x = 0 \]
   \[ \begin{align*}
   \Sigma F_y &= 0 \\
   + R - W &= 0 \\
   R &= W = 200 \text{ N}
   \end{align*} \]

   \[ \begin{align*}
   \Sigma F_x &= 0 \\
   + P - F &= 0 \\
   52 &= \mu R \\
   52 &= \mu \times 200
   \end{align*} \]
Subject: Engineering Mechanics

</tbody>
</table>

**e)**

Find the value of W if the body is in limiting equilibrium. See Fig. 8.

For limiting equilibrium

\[
\begin{align*}
\sum F_y &= 0 \\
+ R - W - 250 &= 0 \\
R &= W + 250 \quad \text{------ (1)}
\end{align*}
\]

\[
\begin{align*}
\sum F_x &= 0 \\
+F - 433.012 &= 0 \\
F &= 433.012 \text{ N} \\
\text{But, } F &= \mu R \\
433.012 &= 0.25 \times R \\
R &= 433.012 / 0.25 \\
R &= 1732.048
\end{align*}
\]

Putting value of R in equation (1)

\[
\begin{align*}
1732.048 &= W + 250 \\
W &= 1482.048 \text{ N}
\end{align*}
\]

**f)**

A 200 N block is at rest on a 30° incline. The coefficient of friction between block & the incline is 0.20. Compute the value of a horizontal force P that causes motion to impend up the incline.

Consider inclined plane as x-x axis and perpendicular to it as y-y axis.

For limiting equilibrium

\[
\begin{align*}
\sum F_y &= 0 \\
+ R - 173.205 - (0.5) P &= 0 \\
R &= 173.205 + (0.5) P \quad \text{----- (1)}
\end{align*}
\]
### Q.5

\[ \Sigma F_x = 0 \]

\[ + (0.866)P - F - 100 = 0 \]

\[ + (0.866)P = (0.20 \times (173.205 + 0.5P) + 100 \]

---

\[ P = 175.77 \text{ N} \]

---

### Q.6

**Answer any FOUR of the following:**

**a)**

A L section consists of two legs 100 mm X 20 mm each with 120 mm as overall depth.

**Ans.**

1) Area calculation

\[ A_1 = 100 \times 20 = 2000 \text{ mm}^2 \]

\[ A_2 = 100 \times 20 = 2000 \text{ mm}^2 \]

\[ A = A_1 + A_2 = 4000 \text{ mm}^2 \]

2) Position of \( x^- \)

\[ X_1 = 100 / 2 = 50 \text{ mm} \]

\[ X_2 = 20 / 2 = 10 \text{ mm} \]
Subject: Engineering Mechanics

<td></td>
<td></td>
</tr>
</tbody>
</table>

b) Find the centroidal position of shaded area with respect to AB.

See Fig. 9

![Diagram](image)

1) Area calculation

- \( A_1 = 100 \times 500 = 50000 \text{ mm}^2 \)
- \( A_2 = \frac{1}{2} \times 20 \times 500 = 5000 \text{ mm}^2 \)
- \( A = A_1 - A_2 = 45000 \text{ mm}^2 \)

2) Position of \( x \)

- \( X_1 = 100 / 2 = 50 \text{ mm} \)
- \( X_2 = 80 + (2/3) \times 20 = 93.333 \text{ mm} \)

\( \bar{x} = 30 \text{ mm} \)

3) Position of \( y \)

- \( y_1 = 20 / 2 = 10 \text{ mm} \)
- \( y_2 = 20 + (100/2) = 70 \text{ mm} \)

\( \bar{y} = 40 \text{ mm} \)

</tbody>
</table>
Q.6
d)  
Ans.

A solid cone of height 40 cm is placed on a cube of side 20 cm as shown in Fig. 11. Locate the position of CG with respect to tip of the cone.

1) Volume Calculation

\[ V_1 = 20 \times 20 \times 20 = 8000 \text{cm}^3 \]
\[ V_2 = (1/3) \pi r^2 h = (1/3) \pi (10)^2 \times 40 = 4188.79 \text{cm}^3 \]
\[ V = V_1 + V_2 = 12188.79 \text{cm}^3 \]

2) \( y \) calculation

\[ y_1 = \frac{4r}{3\pi} = \frac{4 \times 100}{3\pi} = 42.441 \text{mm} \]
\[ y_2 = \frac{b}{3} = \frac{100}{3} = 33.333 \text{mm} \]
\[ y = \frac{A_1 y_1 - A_2 y_2}{A} = \frac{(7853.981 \times 42.441) - (5000 \times 33.333)}{2853.981} = 58.397 \text{mm} \]

Hence, centroid (G) for given section lies at G(\( \frac{x}{x}, \frac{y}{y} \))

= (58.397 mm from y axis & 58.397 mm from x axis)
### Question 6

**Model Answer:**

-e) Find the centre of gravity of composite solid w.r.t. x & y axis. See Fig. 12.

#### Ans.

1) Figure is symmetric @ y-y axis and hence, 
\[ \bar{x} = \text{Maximum horizontal dimension} / 2 \]
\[ = \frac{400}{2} \]
\[ = 200 \text{ mm} \]

2) Volume Calculation

\[ V_1 = \pi r_1^2 h_1 = \pi (200)^2 \times 500 = 62831853 \text{ mm}^3 \]
\[ V_2 = \left(\frac{4}{3}\right) \pi r_2^3 = \left(\frac{4}{3}\right) \pi (150)^3 = 14137167 \text{ mm}^3 \]
\[ V = V_1 + V_2 = 76.96902 \times 10^6 \text{ mm}^3 \]

3) \[ \bar{y} \text{ calculation} \]

\[ y_1 = \frac{500}{2} = 250 \text{ mm} \]
\[ y_2 = 500 + 150 = 650 \text{ mm} \]
\[ y = \frac{V_1 y_1 + V_2 y_2}{V} \]
\[ y = 323.47 \text{ mm} \]
Let, Full cone as Fig. 1 & cut cone as Fig. 2

1) Figure is symmetric @ y-y axis and hence,
\[ x = \frac{\text{Maximum horizontal dimension}}{2} \]
\[ = \frac{60}{2} \]
\[ = 30 \text{ cm} \]

\[ h_1 = 50 \text{ cm}, \quad h_2 = \text{Height of cut cone} \]

In triangle, ABE & CDE
\[ \frac{h}{60} = \frac{h_2}{30} \]
\[ h = \frac{60}{30} h_2 \]
\[ h = 2h_2 \]
\[ h_1 + h_2 = h \]
\[ h_1 + h_2 = 2h_2 \]
\[ h_1 = 2h_2 - h_2 \]
\[ h_1 = 1h_2 \]
\[ 50 = 1h_2 \]
\[ h_2 = 50cm \]
\[ h = 50 + 50 = 100cm \]
