Important suggestions to examiners:

1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.

2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.

3) The language errors such as grammatical, spelling errors should not be given more importance. (Not applicable for subject English and communication skills)

4) While assessing figures, examiner may give credit for principle components indicated in a figure. The figures drawn by candidate and model answer may vary. The examiner may give credit for any equivalent figure drawn.

5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate's answers and model answer.

6) In case some questions credit may be given by judgment on part of examiner of relevant answer based on candidate understands.

7) For programming language papers, credit may be given to any other program based on equivalent concept.

---

Q.1 A Attempt any TEN of the following : 20 Marks

a) Define form factor and peak factor.

Ans: 1. **Form factor:**

   It is defined as the ratio of RMS value to the Average value of an alternating quantity.

   **Value of Form factor:** 1.11 (for a sinusoidal quantity)

2. **Peak (Crest) factor for a sinusoidal quantity:**

   It is defined as the ratio of Maximum value/peak value to the RMS value.

   **Value of Crest (Peak) factor:** 1.41 (for a sinusoidal quantity)

b) Write any two difference points between a.c. and d.c. supply.

Ans: **Differentiate AC supply with DC supply:**

   (Any Two Point Expected : 1 Mark each)

<table>
<thead>
<tr>
<th>S.No.</th>
<th>Points</th>
<th>AC Supply</th>
<th>DC Supply</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Amount of energy that can be carried</td>
<td>Safe to transfer over longer city distances and can provide more power</td>
<td>Voltage of DC cannot travel very far until it begins to lose energy</td>
</tr>
<tr>
<td>2</td>
<td>Cause of the direction of flow of electrons</td>
<td>Rotating magnet along the wire</td>
<td>Steady magnetism along the wire</td>
</tr>
<tr>
<td>3</td>
<td>Frequency</td>
<td>The frequency of</td>
<td>The frequency of direct</td>
</tr>
</tbody>
</table>
alternating current is 50Hz or 60Hz depending upon the country. current is zero.

4 Direction It reverses its direction while flowing in a circuit. It flows in one direction in the circuit.

5 Current It is the current of magnitude varying with time It is the current of constant magnitude.

6 Flow of Electrons Electrons keep switching directions - forward and backward. Electrons move steadily in one direction or 'forward'.

7 Obtained from A.C Generator and mains. Cell or Battery.

8 Passive Parameters Impedance. Resistance only

c) Draw the voltage waveform of three phase a.c. supply for 0 to 2 ohm.

Ans: Voltage waveform of a 3 phase supply with respect to time: (2 Mark)

![Voltage waveform of a 3 phase supply with respect to time](image)

or equivalent figure

d) State the concept of phase sequence.

Ans: Concept of Phase sequence: (2 Mark)

The phase sequence is defined as the order in which all the phases attain their maximum positive values.

e) State the Faraday's law of electromagnetic induction.

Ans: First Law: - Whenever change in the magnetic flux linked with a coil or conductor, an EMF is induced in it. OR Whenever a conductor cuts magnetic flux, an EMF is induced in conductor. (1 Mark)

Second Law: - The Magnitude of induced EMF is directly proportional to (equal to) the rate of change of flux linkages. (1 Mark)
### WINTER– 2017 Examinations

Subject Code: 17318

**Model Answer**

<td>5.</td>
<td>By V/f method</td>
</tr>
</tbody>
</table>
j) Define synchronous speed and slip of 3-ph.M.

Ans:

i) Synchronous Speed:-  
It is speed at which rotating magnetic field rotates in induction motor. OR  
\[ N_s = \frac{120 \cdot f}{P} \]  
Where,  
\[ N_s = \text{Synchronous speed} \quad f = \text{Supply of frequency} \quad \text{and} \quad P = \text{Number of Pole} \]  
Synchronous Speed unit:  
Unit : RPM or RPS

ii) Slip:-  
It is the ratio the difference between the synchronous speed and actual speed of the rotor to synchronous speed.

\[
\% \text{ Slip} = \frac{N_s - N}{N_s}
\]

k) Write down any two applications of servo motor.

Ans: Applications of servo motor :  
(Any Two expected: 1 Mark each)

1. Robotics  
2. Conveyor Belts  
3. Camera Auto Focus  
4. Robotic Vehicle  
5. Solar Tracking System  
6. Metal Cutting & Metal Forming Machines  
7. Antenna Positioning  
8. Woodworking/CNC  
9. Textiles  
10. Printing Presses/Printers  
11. Automatic Door Openers

l) State specialty of universal motor.

Ans: Specialty of universal motor:  
(2 Mark)  
Motors that can be used with a single phase AC source as well as a DC source of supply voltages

m) State the importance of ELCB in circuit.

Ans:  
1. importance of ELCB in circuit:  
(2 Mark)

It protects person against shock due to leakage current also it protects circuit/equipment against overload and short circuit conditions.
n) List any four tools used for safety in workshop.

Ans: Following are the safety tools used in workshop: (Each point: 1/2 Mark)

1. **Rubber Mats**: are placed in front of electrical panels and switch boards.
2. **Hand Gloves**: from protect shock in the working period.
3. **Tester**: To test the supply before working.
4. **Earthing**: Earth rod

OR

(Any Four Tools Expected: 1/2 Mark each, Total 2 Marks)

1. Rubber hand gloves of proper voltage rating.
2. Safety shoes
3. Safety Belt
4. Ladder
5. Earthing devices
6. Helmet
7. Line tester
8. Rope
9. Hand tools insulated
10. Dress code 100 % cotton etc.

Q.2 Attempt any FOUR of the following: 16 Marks

a) \( V = 200 \sin (314 \ t + \frac{\pi}{3}) \) Determine: (i) Frequency (ii) \( V_{rms} \) (iii) \( V_{ave} \) (iv) Phase-angle

Ans: Given data:

\( v = 200 \sin (314 \ t + \frac{\pi}{3}) \) Maximum Value \( V_m \) : 200 V

i) Frequency \( = \frac{\omega}{2 \pi} \) ................................................................. (1/2 Mark)

\( \frac{314}{2 \pi} \)

\( F = 49.97 \approx 50 \ H_z \) ................................................................. (1/2 Mark)

ii) RMS value \( V_{rms} = 0.707 \times V_m \) ......................................................... (1/2 Mark)

\( = 0.707 \times 200 \)

\( = 141.4 \text{ Volt} \) ................................................................. (1/2 Mark)
iii) \[ V_{avg} = 0.637 \times V_m = 0.637 \times 200 = 127.4 \text{ Volt} \] (1/2 Mark)

iv) Phase angle \( \phi = \frac{\pi}{3} = 60^0 \) (1/2 Mark)

\[ \phi = 60^0 \] (1/2 Mark)

b) Draw the waveform and phasor diagram for current and voltage when a.c. flows through a purely capacitive circuit. Also write equation for voltage and current.

Ans:

Schematic diagram of AC flowing through pure capacitive: (1 Mark)

or equivalent Diagram

Pure capacitive circuit: (Waveform & Phasor Diagram 1 Mark each)

Waveform: Phasor Diagram:

Expression for Voltage and Current: (1 Mark)

1. Equation for voltage \( V = V_m \sin \omega t \)
2. Equation for current \( I = I_m \sin (\omega t + \frac{\pi}{2}) \) or \( I_m \sin (\omega t + 90^0) \)
A coil of resistance 10 ohm and inductance 0.01 H are connected in series with 100 μF capacitor across 230 V, 50 Hz a.c. supply. Find:

(i) \( X_L \)
(ii) \( X_C \)
(iii) \( Z \)
(iv) \( I \)

**Ans:**

\[ I = \frac{V}{Z} \]

i) \( X_L = \)

\[ X_L = \frac{2 \pi f L}{\omega} \]

\[ = 2 \pi \times 50 \times 0.01 \]

\[ X_L = 3.141 \text{Ω} \]

(1/2 Mark)

ii) \( X_L = \)

\[ X_C = \frac{1}{2 \pi f C} \]

\[ = \frac{1}{2 \pi \times 50 \times 100 \times 10^{-6}} \]

\[ X_C = 31.8309 \text{ ohm} \]

(1/2 Mark)

iii) Impedance \( Z = \)

\[ \text{Im pedance } Z = \sqrt{(R)^2 + (X_L - X_C)^2} \]

\[ = \sqrt{(10)^2 + (3.141 - 31.8309)^2} \]

\[ \text{Im pedance } Z = 30.37 \text{ ohm} \]

(1/2 Mark)

iv) To Find Current=

\[ I = \frac{V}{Z} \]

\[ = \frac{230}{30.37} \]

\[ I = 7.573 \text{ Amp} \]

(1/2 Mark)

d) Draw the phasor diagram of R-L-C series circuit when

(i) \( X_L > X_C \)
(ii) \( X_L = X_C \)
(iii) \( X_L < X_C \)

**Ans:**

(R-L-C series circuit- 1 Marks, Phasor diagram-3 Mark)

R-L-C Series circuit with phasor diagram :-

![Phasor Diagram](image-url)
**Phasor Diagram:**

i) \( X_L > X_C \) (lagging)  

ii) \( X_C > X_L \) (leading)  

iii) \( X_L = X_C \) (UPF)

---

e) A series R-L circuit takes a current of 2 A when connected to 200 V, 50 Hz a.c. supply and consumes 300 watts. Calculate resistance, inductance, impedance and power factor.

**Ans:**

**Given Data:**

\[ I = 2 \, \text{A}, \quad V = 200 \, \text{V}, \quad f = 50 \, \text{Hz}, \quad \text{and} \, P = 300 \, \text{watt} \]

i) **Impedance** \( Z \):

\[
Z = \frac{V}{I} = \frac{200}{2} = 100 \, \Omega 
\]

ii) **Resistance** \( R \):

\[
\cos \phi = \frac{R}{Z} \quad \therefore \quad R = \cos \phi \times Z = 0.75 \times 100 = 75 \, \Omega 
\]

iii) **Inductance** \( L \):

\[
X_L^2 = Z^2 - R^2 \\
X_L = \sqrt{Z^2 - R^2} \\
X_L = \sqrt{(100)^2 - (75)^2} \\
X_L = 66.14 \, \Omega \\
X_L = 2\pi F L \quad \therefore \quad L = \frac{X_L}{2\pi F}
\]
\[ L = \frac{66.14}{2\pi \times 50} \]

\[ L = 0.210 \text{ H} \]  
(1/2 Mark)

ev) Power Factor :

\[ P = V I \cos \phi \]  
(1/2 Mark)

\[ \cos \phi = \frac{300}{200 \times 2} \]

\[ \cos \phi = 0.75 \text{ lag} \]  
(1/2 Mark)

\[ f) \text{ For below shown phasor diagram of R-L-C series circuit find (i) Impedance(ii) Power factor (iii) Power consumed (iv) Nature of circuit} \]

\[ \text{Ans:} \]

i) Impedance \( Z \) :

\[ Z = \frac{230}{1} \]  
(1/2 Mark)

\[ Z = 230 \ \Omega \]  
(1/2 Mark)

ii) Power Factor :

\[ \cos \phi = \cos (30) \]  
(1/2 Mark)

\[ \cos \phi = 0.866 \text{ leading} \]  
(1/2 Mark)

iii) Power Consumed \( P \) :

\[ P = V I \cos \phi \]  
(1/2 Mark)

\[ P = 230 \times 1 \times 0.866 \]

\[ P = 199.18 \text{ Watt} \]  
(1/2 Mark)

iv) Nature of Circuit : Capacitive  
(1 Mark)
Q.3 Attempt any FOUR of the following: 16 Marks

a) Draw the power triangle and define active power. Reactive power and apparent power.

Ans: **Power triangle:**  

\[
\begin{align*}
S &= I^2Z = VI \\
P &= I^2R = VI \cos \phi \\
Q &= I^2X_L = VI \sin \phi \\
S &= I^2Z = VI \\
Q &= I^2X_C = VI \sin \phi
\end{align*}
\]

i) Active Power (P):-  

The active power is defined as the average power \( P_{avg} \) taken by or consumed by the given circuit.

\[
P = V.I.\cos \phi \quad \text{Unit: Watt OR Kilowatt}
\]

ii) Reactive Power (Q):-  

The reactive power is defined as the product of \( V \), \( I \) and sine of angle between \( V \) and \( I \) i.e. \( \phi \)

\[
Q = V.I. \sin \phi
\]

Units: - VAR OR KVAR

iii) Apparent Power (S):  

This is simply the product of RMS voltage and RMS current.

\[
\text{Unit: volt-ampere (VA) or kilo-volt-ampere (kVA)}
\]

or \( \text{Mega-vol-ampere (MVA)} \)

\[
S = VI = IZ \text{ volt-amp}
\]

b) Give the significance of power factor. Write down the power factor for purely inductive, capacitive and resistive circuit.

Ans: **Significance of Power factor:** (Any two point expected)  

1. P.F. increases current reduce so; cross section of conductor decreases hence its cost is reduces.
2. P.F. increases current reduce so, cross section of conductor decreases hence weight
3. Copper losses decrease, hence transmission efficiency increases.
4. Voltage drop reduces, hence voltage regulation becomes better.
5. Handling capacity (KW) of each equipment increases as p.f. increases.
6. Less capacity (KVA) rating of equipments are required so capital cost decreases.
7. Cost per unit (KWH) decreases.

**Write down the power factor for purely inductive, capacitive and resistive circuit. (2 Mark)**

1. **Purely inductive**: Zero (lag)
2. **Purely Capacitive**: Zero (lead)
3. **Purely Resistive**: 1

**c)**

State the condition for resonance. Write about the value of current during series resonance. Show the graphical representation of current in series resonance circuit.

**Ans:**

1. **Condition for resonance:**

   In a series RLC circuit the Series Resonance occurs at point where the inductive reactance of the inductor becomes equal in value to the capacitive reactance of the capacitor. In other words, \( XL = XC \).

2. **Value of current during series resonance.**

   Current during series resonance is **maximum** as value of impedance is equal to resistance in the circuit.
3. Graphical representation of current: (1 Mark)

\[ i \]
\[ i_{max} \]
\[ f \]
\[ f_r \]
\[ Q \]
\[ Q \]
\[ R \]
\[ L \]
\[ C \]
\[ \frac{1}{2\pi\sqrt{LC}} \]

or equivalent circuit

d) Define resonant frequency and Q-factor. Give relation of each.

Ans: i) Resonant frequency:

In a series RLC circuit there becomes a frequency point where the inductive reactance of the inductor becomes equal in value to the capacitive reactance of the capacitor. In other words, \( XL = XC \). The point at which this occurs is called the Resonant Frequency.

\[
 f = \frac{1}{2\pi\sqrt{LC}}
\]

Where \( f = \) Resonant Frequency.
\( L = \) Inductance in Henery.
\( C = \) Capacitance in farads.

ii) Q-factor:

In series circuit it is defined as voltage magnification in the circuit at resonance.

OR

In parallel circuit it is defined as equal to the current magnification in the circuit at resonance.

Expression of Q Factor: \( Q \) \( \frac{1}{R} \times \sqrt{\frac{L}{C}} \)

e) List the advantages of 3-phase supply over single phase (any four).

Ans: Advantages of 3-phase supply over 1-phase supply: (Any Four points each point 1 Mark)

1. More output: for the same size output of poly-phase machines is always higher than single phase machines.

2. Smaller size: for producing same output the size of three phase machines is always smaller than that of single phase machines.
3. **More power is transmitted**- it is possible to transmit more power using a three phase system than single system.

4. **Smaller cross-sectional area of conductors**- if the same amount of power is transmitted then the cross-sectional area of the conductors used for three phase system is small as compared to that of single phase system.

5. Better power factor-power factor of three phase machines is better than that of single phase machines.

6. Three phase motors are self starting-three phase ac supply is capable of producing a rotating magnetic field when applied to stationary windings, the three phase ac motors are self starting. While single phase induction motor needs to use additional starter windings

7. Horse power rating of three phase motors is greater than that of single phase motor.

8. Power delivered by asingle phase system fluctuates whereas for three phase system power delivered to the load is the same at any instant.

f) **Give relation between line and phase current, line and phase voltage for 3-ph balanced (i) Star connected and (ii) Delta connected load.**

**Ans:**

(i) **Star connected:**

a) The relation between line current and phase current in star connected load.

\[ I_L = I_{ph} \]

b) The relation between line voltage and phase voltage in star connected Load

\[ V_L = \sqrt{3} V_{ph} \]

(ii) **Delta connected load:**

a) The relation between line current and phase current in delta connected circuit.

\[ I_L = \sqrt{3} I_{ph} \text{ OR } I_{ph} = I_L / \sqrt{3} \quad \text{where } I_L \text{ is line Current and } I_{ph} \text{ is phase Current} \]

b) The relation between line voltage and phase voltage in delta connected circuit

\[ V_{ph} = V_L \quad \text{where } V_L = \text{line voltage & } V_{ph} = \text{Phase volatge} \]
Q.4 Attempt any FOUR of the following : 16 Marks

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>Three impedances of ((4 + 3j)) ohms each are connected in star to a 3-ph, 440 V, 50 Hz balance a.c. supply. Calculate line voltage, phase voltages, line current phase current, power factor and power.</td>
</tr>
</tbody>
</table>

Ans: Solution:

i) Line voltage \(V_L = 440 \text{ Volt}\)  
   \[
   V_p = \frac{V_L}{\sqrt{3}} 
   \]

ii) Phase voltage \(V_{ph} = 440 \text{ Volt}\)  
   \[
   V_{ph} = \frac{440}{\sqrt{3}} = 254.034 \text{ volt} 
   \]

iii) Phase current \((I_{ph})\):  
   \[
   \text{Phase current} \ (I_{ph}) = \frac{V_{ph}}{Z_{ph}} 
   \]
   \[
   \text{Phase current} \ (I_{ph}) = \frac{254.034}{(4 + 3j)} = 
   \]
   \[
   \frac{254.034}{5} \angle 36.86 
   \]
   \[
   \text{Phase current} \ (I_{ph}) = 50.80 \angle -36.86 
   \]

iv) Line current \((I_{line})\):

   Phase current is equal to line current :

   \[
   \therefore \text{Line current} \ (I_L) = 50.80 \angle -36.86 
   \]

v) Power factor.

   \[
   \therefore \text{Power factor} = \cos \phi = \cos (-36.86) 
   \]
   \[
   \therefore \text{Power factor} = \cos \phi = 0.80 \text{ lagging} 
   \]

vi) Power:

   \[
   P = 3 \times V_{ph} \times I_{ph} \times \cos \theta 
   \]
   \[
   P = 3 \times 254.034 \times 50.80 \times 0.8 
   \]
   \[
   P = 30971.82 \text{ watt} 
   \]

---
b) Draw delta connected 3-ph load and show line and phase voltages and current on it.

Ans:

Draw the connection diagram:-

\[ \text{Diagram : 2 Marks} \]

OR equivalent diagram

1. Line voltages = Phase voltages \( (1 \text{ Mark}) \)
2. Line currents = \( I_R \), \( I_Y \), and \( I_B \). \( (1/2 \text{ mark}) \)
3. Phase currents = \( I_{RY} \), \( I_{YB} \), and \( I_{BR} \). \( (1/2 \text{ mark}) \)

---

c) Explain self induced emf, mutually induced emf and dynamically induced emf.

Ans:

Figure:-

\[ \text{OR} \]

i) Self induced emf:

**Self-induced emf** is the e.m.f induced in the coil due to the change of flux produced by linking it with its own turns. This phenomenon of self-induced emf

\[ e \propto \frac{dl}{dt} \quad \text{or} \quad e = L \frac{dl}{dt} \quad \text{OR} \]

In the Statically induced emf flux linked with coil or winding changes \( (d\Phi/dt) \) and coil or winding is stationary such induced emf is called Statically induced emf

\[ E = - N (d\Phi/dt) \]
ii) mutually induced emf: (1 Mark)

The emf induced in a coil due to the change of flux produced by another neighbouring coil linking to it, is called **Mutually Induced emf**.

\[ e = M \frac{dI}{dt} \]

iii) Dynamically induced emf: (1 Mark)

If flux linking with a particular conductor is brought about by moving the coil in stationary field or by moving the magnetic field w.r.t. to stationary conductor. Then the e.m.f. induced in coil or conductor is known as "Dynamically induced e.m.f.

\[ E = B l \cdot v \cdot \sin \theta \text{ volts} \]

d) State Fleming’s right hand rule and write down formula for energy stored in magnetic field.

**Ans:**

1. Fleming’s Right Hand Rule: (2 Mark)

   Arrange three fingers of right hand mutually perpendicular to each other, if the first figure indicates the direction of flux, thumb indicates the direction of motion of the conductor, then the middle finger will point out the direction of inducted current.

2. Formula for energy stored: (2 Mark)

   The formula for the energy stored in a magnetic field is

   \[ E = \frac{1}{2} LI^2 \text{ Joules} \]

e) Define regulation and efficiency of transformer. Which transformer will he said to be a quality transformer one with regulation 2% or the other with regulation 4%?

**Ans:**  

i) **Efficiency**: It is the ratio of output power to the input power of the transformer. (1 Mark)

\[ \text{Transmission Efficiency} = \frac{\text{Output power at receiving end}}{\text{Input power at sending end}} \times 100 \]

\[ \eta = \% = \frac{\text{Output } (P_R) \cdot \text{(Load (power) at receiving end)}}{\text{Output } (P_R) + \text{Total losses}} \times 100 \]

Where, \( P_R \) is o/p power at receiving end

**OR**
% Efficiency = \frac{P_R}{P_K + I^2 R_T} \times 100 \quad \text{for 1-phase} \quad \text{Where, } R_T \text{ is total resistance}\]

% Efficiency = \frac{P_R}{P_K + 3 I^2 R_{ph}} \times 100 \quad \text{for 3-phase} \quad \text{Where, } R \text{ is resistance of per phase}\]

% Efficiency = \frac{\text{output power}}{\text{output power} + \text{total copper losses}} \times 100 \quad \text{OR}

\( \text{(1 Mark)} \)

ii) Voltage Regulation:

Voltage regulation is nothing but voltage drop in transmission line expressed in % of receiving end voltage

\[ \% \text{ Regulation} = \frac{V_R - V_S}{V_R} \times 100 \quad \text{for 1-phase} \]

\( \text{OR} \)

\[ \% \text{ Regulation} = \frac{\text{Sending End Voltage} - \text{Receiving End Voltage}}{\text{Receiving End Voltage}} \times 100 \]

\[ \% \text{ Voltage Regulation} = \frac{V_R - V_S}{V_R} \times 100 \quad \text{for 1-phase} \]

Where, \( V_R = \text{receiving end voltage} \quad V_S = \text{Sending end voltage} \)

\[ \% \text{ Regulation} = \frac{I_R R_T \cos \phi_R \pm X_T \sin \phi_R}{V_R} \times 100 \quad \text{For 1-phase} \]

\( \text{Where, } R_T = \text{Total resistance} \quad \& \quad X_T = \text{Total reactance} \)

\( \text{Where, “+ ve” sign is used when Power factor is lagging.} \)

\( \text{“- ve” sign is used when Power factor is Leading.} \)

Which transformer will be said to be a quality transformer one with regulation 2% or the other with regulation 4%: \( \text{(1 Mark)} \)

- 2% regulation is said to be better for a quality transformer.
**Q.5** Attempt any FOUR of the following :16 Marks

<table>
<thead>
<tr>
<th>a)</th>
<th>A 1.5 kVA, 230/110 V, 50 Hz single phase transformer has 80 turns on secondary winding. Calculate number of primary turns full load primary and secondary currents.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ans:</td>
<td>$V_1 = 230,\text{V} \quad V_2 = 110,\text{V} \quad N_f = \ ? \quad N_2 = 80 \quad I_1 = \ ? \quad I_2 = \ ?$</td>
</tr>
</tbody>
</table>

i) To Find full load Primary current $I_1$:

$$I_1 = \frac{KVA \times 10^3}{V_1\,\text{volt}} \quad \text{----------------------------------------------- (1/2 Mark)}$$
\[
I_1 = \frac{1.5 \times 10^3}{230} = 6.52 \text{ Amp} \hspace{1cm} \text{(1/2 Mark)}
\]

ii) To Find full load Secondary \( I_2 \):
\[
I_2 = \frac{KVA \times 10^3}{V_2 \text{ volt}} \hspace{1cm} \text{(1/2 Mark)}
\]
\[
I_2 = \frac{1.5 \times 10^3}{110} = 13.63 \text{ Amp} \hspace{1cm} \text{(1 Mark)}
\]

iii) Number of primary winding turns \( N_1 \):
\[
\frac{V_2}{V_1} = \frac{N_2}{N_1} \quad \text{OR} \quad \frac{V_1}{V_2} = \frac{N_1}{N_2},
\]
\[
N_1 = \frac{V_1 \times N_2}{V_2} \hspace{1cm} \text{(1/2 Mark)}
\]
\[
N_1 = \frac{230}{110} \times 80 = 167.27 \text{ turns} \hspace{1cm} \text{(1 Mark)}
\]

b) State the emf equation of a single phase transformer. Write meaning of each term.

Ans: \[\text{EMF equation of Transformer:-} \]

Let, \( N_1 \) = Number of turns in the primary
\( N_2 \) = Number of turns in the Secondary
\( \Phi m \) = Maximum flux in core (wb) = BmA
\( F \) = Frequency
\( E_1 = 4.44 \ f \ \phi m N_1 \)
\( E_1 = 4.44 \ f \ Bm A N_1 \)

Secondary winding:
\( E_2 = 4.44 \ f \ \phi m N_2 \)
\( E_2 = 4.44 \ f \ Bm A N_2 \)
### c) Can auto transformer be used as step up and step down transformer? If yes, show the circuits.

**Ans:** Yes, auto transformer can be used as a step up and step down transformer.-------- (1 Mark)

### d) Explain the working principle of 3-ph I.M.

**Ans:** **Working principle of 3-phase induction motor:** (Working principle:4 Mark)

- When 3-phase stator winding is energized from a 3-phase supply, a rotating magnetic field is set up in air gap which rotates round the stator at synchronous speed \( N_s = 120 f/P \).
- The rotating field passes through the air gap and cuts the rotor conductors, which as yet, are stationary.
- Due to the relative speed between the rotating flux and the stationary rotor, e.m.f.s are induced in the rotor conductors.
- Since the rotor circuit is short-circuited, currents start flowing in the rotor conductors.
- The current-carrying rotor conductors are placed in the magnetic field produced by the stator.
- Consequently, mechanical force acts on the rotor conductors.
- The sum of the mechanical forces on all the rotor conductors produces a torque which tends to move the rotor.
- In the same direction as the rotating field according to Lenz’s law.
e) Draw the torque-speed characteristics of 3-ph I.M. Explain about the nature.

Ans: Torque-Speed characteristics : (Characteristics - 2 Marks & Explanation:- 2 Mark)

Explanation: From the above characteristics:-

- When Slip (S) ≈ 0 (i.e N ≈ Ns) torque is almost zero at no load, hence characteristics start from origin.
- As load on motor increases Slip increases and therefore torques increases.
- For lower values of load, torque proportional to slip, and characteristics will having linear nature.
- At a particular value of Slip, maximum torque conditions will be obtained which is R₂ = SX₂
- For higher values of load i.e. for higher values of slip, torque inversely proportional to slip and characteristics will having hyperbolic nature. In short breakdown occurs due to over load.
- The maximum torque condition can be obtained at any required slip by changing rotor resistance.

f) Define synchronous speed. Write down the formulas for slip, slip speed, rotor frequency.

Ans: Synchronous Speed:-

OR

\[ N_s = \frac{120 \times f}{P} \]

Where,

\[ N_s = \text{Synchronous speed} \quad f = \text{Supply of frequency} \quad \text{and} \quad P = \text{Number of Pole} \]

Synchronous Speed unit:

Unit : RPM or RPS
i) Slip:-

It is the ratio the difference between the synchronous speed and actual speed of the rotor to synchronous speed.

It is expression in percentage =

\[
\text{Slip} = \frac{N_s - N}{N_s}
\]

ii) Slip Speed:-  \(N_s - N\)  Unit: RPM or RPS  

iii) Rotor Frequency:-  \(S.f\)  Unit: Hertz

Q.6 Attempt any FOUR of the following :  

a) Explain the speed control method of 3-Ph I.M. using variable frequency drive using thyristor.

Ans: 

By Voltage/ frequency control (V/f) method:  

![Diagram]

- If the ratio of voltage to frequency is kept constant, the flux remains constant.
- The maximum torque which is independent of frequency can be maintained approximately constant.
- However at a low frequency, the air gap flux is reduced due to drop in the stator impedance and the voltage has to be increased to maintain the torque level.
- This type of control is usually known as Volts/ Hertz or V/f control.
- A simple circuit arrangement for obtaining variable voltage and frequency is as shown in the above figure.
b) Write down the constructional difference between squirrel cage and slip ring 3-ph I.M.

Ans: (Any four point expected: 1 Mark each)

c) Explain the working principle of stepper motor. Mention its types. Write any two applications.

Ans: Working Principle of stepper Motor- (1 Mark)

A stepper motor rotates through a fixed angular step in response to each input current pulse received by its controller.

Types of Stepper Motor :- (2 Mark)

1) Variable Reluctance Motor
2) Permanent Magnet Motor
1) Variable Reluctance Motors: 

(Explanation not compulsory)

Working:-

When phase A is excited rotor attempts minimum reluctance between stator and rotor and is subjected to an electromagnetic torque and there by rotor rotates until its axis coincides with the axis of phase A.

Then phase ‘B’ is excited disconnecting supply of phase ‘A’ then rotor will move 30 anticlockwise directions. The Same process is repeated for phase ‘C’

In this way chain of signals can be passed to get one revolution and direction can be also changed.

OR

2) Permanent Magnet Motor:-

Working :-

If the phase is excited in ABCD, due to electromagnetic torque is developed by interaction between the magnetic field set up by exciting winding and permanent magnet.

Rotor will be driven in clockwise direction.

Applications of stepper motor- 

(Two application expected-1 Mark)

1. Suitable for use with computer controlled system
2. Widely used in numerical control of machine tools.
3. Tape drives
4. Floppy disc drives
5. Computer printers
6. X-Y plotters
7. Robotics
8. Textile industries
9. Integrated circuit fabrication
10. Electric watches
11. In space craft’s launched for scientific explorations of planets.
12. In the production of science friction movies
13. Automotive
14. Food processing
15. Packaging

d) State the working principle of a.c. servo motor and draw its torque speed characteristics.

Ans: Figure: (Figure: 1 Mark & Principle: 2 Mark)

Principle of working of servo motor:
There are some special types of application of electrical motor where rotation of the motor is required for just a certain angle not continuously for long period of time. For these applications some special types of motor are required with some special arrangement which makes the motor to rotate a certain angle for a given electrical input (signal). Such motors can be ac or dc motors. When controlled by servo mechanisms are termed as servomotors.

These consist of main and control winding and squirrel cage / drag cup type rotors. Vr is the voltage applied to the main or reference winding while Vc is that applied to control winding which controls the torque- speed characteristics. The $90^0$ space displacement of the two coils/windings and the $90^0$ phase difference between the voltages applied to them result in production of rotating magnetic field in the air gap due to which the rotor is set in motion. The power signals can be fed from servo amplifiers either to the field or armature depending upon the required characteristics.
OR

Working of AC Servomotor:

- The control phase is usually supplied from a servo amplifier.
- The speed and torque of the rotor are controlled by the phase difference between the control voltage and the reference phase voltage.
- The direction of rotation of the rotor can be reversed by reversing the phase difference, from leading to lagging (or vice versa) between the control phase voltage and the reference phase voltage.

Torque-speed characteristics of A.C. Servo Motor:

(1 Mark)

e) Give the necessity of earthing. State the range of voltage between earth and neutral of healthy wiring.

Ans: Necessity of Earthing: (Any Two point are expected) (2 Mark)

1. To provide an alternative path for the leakage current to flow towards earth.
2. To save human life from danger of electrical shock due to leakage current.
3. To protect high rise buildings structure against lightening stroke.
4. To provide safe path to dissipate lightning and short circuit currents.
5. To provide stable platform for operation of sensitive electronic equipments.

The range of voltage between earth and neutral of healthy wiring: (2 Mark)

For a healthy wiring the voltage between earth and neutral is considered to be zero volts.
Write advantages of MCCB over fuse (any four).
